

Programming for Economist

Exam and recap questions
Class 9

Matias B.F. Hall,
Institute of Economics,
August 2026

KØBENHAVNS UNIVERSITET

Agenda for today

1. Exam
2. Any recap questions?
3. Work on your model project/prepare for the exam.

1. Exam preparation

1. Be completely done with both projects.
2. Prepare the structure of your hand in: A single zip file with your group name only containing
 1. A general README.md for your portfolio
 2. Your data analysis project (in the folder 01_dataproject)
 3. Your model analysis project (in the folder 02_modelproject)
 4. Your exam project (in the folder 03_examproject)
3. Download and prepare the AI declaration
4. Go through the checklist and recap notebook
5. Look at lectures and PS
 1. No need to memorise but make a few notes what material/code can be found where
6. Old exams can be a help but are harder than this year
7. Sign up as a group on Digital Eksamen

1. At the Exam

- Focus on getting an answer to each question first.
 - No need to be perfect, but address problems by commenting on it. That shows understanding and gives points.
- Before delegating questions, make sure that no one is working on something relating to each other.
 - Code, especially for an exam, is often written linearly, making it hard to work backwards
 - So, read all questions and make sure the way you split the work makes sense
- Use your intuition - does the results I get make sense?
 - Testing as you have seen in the PS can together with your intuition catch most mistakes.
- Make sure the notebook runs from start to finish and stands on it's own like a report.

2. Any recap questions?

3. Work on model project or prepare for the exam.
